

Home Trial Services

Bringing patient choice and streamlined flexible services for your trial’s success globally

Home Trial Services enables trials to be conducted where the patient prefers, using AES clinical experts to increase site and patient flexibility and protocol adherence.

70% of patients live more than two hours away from site locations and struggle to commit to regular site visits.¹ But what if you could bring the trial to the patients?

Our Home Trial Services (HTS) provides the ultimate in flexibility and patient choice by providing global healthcare professional (HCP) expertise to conduct clinical trials where the patient prefers, such as the patient’s home, office, or school. For the past 8+ years AES led decentralized clinical trial (DCT) strategies using home visits. Providing us the foundation to develop our own streamlined services, adding to our DCT Ecosystem

Quality you and your patients can count on.

We know you want the highest quality care for patients in your trials, and with Home Trial Services, you can trust our expertly trained and qualified HCPs to conduct clinical trial tasks.

AES attracts and retains top talent so you get the best for your trial. We train nurses directly to minimize any deviations from the protocol. From trial start-up workflows to data collection — HTS ensures your trial runs efficiently which positively impacts study timelines and overall costs.

Robust management for site confidence.

Home Trial Services is a reliable and fully managed staffing solution for supporting patient flexibility.

- We provide oversight and accountability for home trial staff.
- From project management of nursing tasks, nurse protocol training, scheduling, and more – we ensure protocol windows are not missed and quality stays high.
- Our advanced technology platform facilitates remote data oversight and enables smooth (eSource) data capture and transmission.

A FLEXIBLE SOLUTION THAT DELIVERS

Bringing the trial to the patient as part of the AES DCT Ecosystem

Global access to expertly trained healthcare professionals

Improve protocol adherence and data quality for accurate submission

Decrease patient burden and increase participation

1. Digital R&D: Transforming the future of clinical development, Deloitte Insights 2018.

Dedicated point of contact for all Home Trial Services.

HTS eliminates multiple layers in communication by giving sites direct access to the HCPs. This means there's no frustrating delay in getting answers to queries or patient concerns. Instead, you'll receive streamlined and proactive communication from your HTS project manager regarding any patient changes or answering any questions you have.

At home. Around the globe.

Home Trial Services can be implemented globally depending on individual protocol requirements.

Home Trials Services brings together speed, robust technology, top local HCPs, and quality data control. Best of all, it brings the patient and trial together at the place they are most comfortable.

HIGH QUALITY. HIGHLY EFFICIENT.

HERE'S WHAT IN-HOME PATIENT VISITS COULD MEAN FOR YOUR NEXT TRIAL:

Dedicated and Integrated Team

Streamlined start-up, communication, and alignment with your dedicated and proactive HTS team.

Quality Staffing

AES's ability to attract, retain and train top talent as well as our oversight accountability ensures your in-home patient visits run smoothly.

Rigorous Quality Controls

Proven AES quality assurance to meet GCP standards and ensure adherence to the same high-quality controls and processes.

More Convenience for Patients

Provides the ultimate in choice and flexibility by enabling patients to participate in clinical trials within the community setting of their choice.

Protocol Adherence

Electronic (eSource) data collection and internal data QC team ensure complete and accurate data submission.

Robust Technology

Platform facilitates remote data monitoring, enables smooth data capture and transmission, and effectively manages and schedules HCP staff.
